

# SMALL The Next ~~Big~~ Thing

Tetra is the next-generation analog poly synth from master synth designer Dave Smith. Tetra takes the award-winning sound and features of Mopho, multiplies them by four, and packs them in a box less than half an inch larger!

Tetra has multiple personalities. It is a four-voice, analog poly synth, a “Prophet-4.” It’s a four-part, multitimbral synth, essentially four Mophos in one very compact box. And it’s a voice expander for other Tetras or the Prophet ‘08.

- Affordable, fully programmable poly synth with a 100% analog signal path.
- Classic, real analog sound—including legendary Curtis analog low-pass filters.
- Four-part multitimbral capability with four separate outputs.
- Combo Mode for huge unison patches, stacked sequences, and “modular-style” poly sounds.
- Expandable: poly chain with other Tetras, Prophet ‘08, and Mopho for expanded polyphony.
- Just 7.9” x 5” (20.07 cm x 12.7 cm).
- USB 2.0.
- Free editor for Mac OS and Windows.
