

# Leslie Speakers

# 110-112

- ◆ For multi-channel organs. Creates "orchestra" spaced sound at a modest price.
- ◆ Animates the music throughout the room.

Multi-channel organs can now re-create the exciting "presence" of a live concert with the Leslie 110-112 speaker package. The flute section of the organ output is reproduced on the Model 110 and the complex (or string) voices are channeled to the Model 112 speaker. In this way, your music takes on unmatched richness and vitality. Since these speakers operate from the organ's internal amplification system, they can be connected to any type dual-channel organ. The rotors can be operated in either the "Tremolo" or "Chorale" speeds...or mixed. The two cabinets are identical except for the speakers and rotors...the Model 110 is tailored to the flute section output of the organ, while the 112 is designed for the complex voices. Add to all these features the elegant furniture design of the cabinets and the modest price...and you'll know why this package has become one of the most popular in the entire Leslie speaker line.
